

Back-end: MongoDB

Node JS – Blog Posts Schema

The following exercise contains the following subjects:

- MongoDB

Instructions

Let's create a mongo database that holds blog posts.

Users are able to create blog **post's** and create **comments** on blog post.

Part 1

Design your Data Model

1. Create an appropriate schema for a blog.
 - What collections do you need?
 - How are you going to structure your documents?
 - Should you embed your data or use references?

Resources to read about it:

The Mongo Docs have a great explanation of this.

For example [this one](#)

Youtube videos.

Articles. or example: [this one](#)

Take your time understanding how to design your data model. Look at different resources on the web.

Write down your design on a piece of paper or an online schema creator.
