Node JS – Restaurant collection

Instructions

1. Create a database called findMyRestaurant
2. Create a collection called restaurants
3. inside the collection create at least 5 restaurant

documents that include the following:

- restaurant name
- a sub-document called to address that includes:
 - a city
 - a street
- An array of coordinates e.g. [-77,564, 40.677]
- a type of cuisine
- a boolean if it is Kosher/Halal or not
- An array of at least 3 reviews that include:
 - a date
 - an integer score

To test your data against our queries do the following:

Only 3 different city names

Only 3 different types of cuisine

Give different dates for your reviews.
