Back-end: MongoDB

Node JS – update and delete

The following exercise contains the following subjects:
- mongoose
- postman

Instructions

Create the right routes and use postman to test your work to do the following:

Update

1. update a product to become active/not active and change the value of its discount.
   - Make sure they can only update fields that we have in our model.

Delete

1. Delete a specific product
2. Delete all products
